Morteza Karimi

Team Lead & Senior Software Engineer | Node.js | NestJS | Next.js |
Modernizing Systems & Driving Efficiency
Tehran, Tehran Province, Iran

Summary

With a 13-year journey in software engineering, I specialize in transforming complex business challenges into streamlined, modern, and high-performance applications. My passion lies in migrating legacy systems to cutting-edge technology stacks, enabling companies to unlock new levels of efficiency and data accuracy.

As a hands-on Team Leader and Senior Developer, my core expertise is centered around the Node.js, NestJS, and Next.js ecosystem. I have a proven track record of architecting and building robust ERP systems from the ground up, leading development teams, and fostering a culture of quality and collaboration.

At my most recent role, I led a team in developing a comprehensive ERP platform that replaced a fragmented system of Excel files, resulting in a 90% reduction in process-related problems and a significant boost in operational clarity for the construction company it served.

Beyond my primary roles, I am passionate about contributing to the developer community through open-source projects. I believe in writing clean, scalable code and mentoring fellow developers to elevate the entire team's capabilities.

I am currently seeking opportunities to lead and contribute to a forward-thinking team as a Team Leader or Senior Software Engineer, where I can leverage my skills in system architecture and modern JavaScript development to build impactful solutions.

Feel free to reach out via InMail or email if you'd like to discuss potential opportunities or collaborations.

Experience

ParsPack | پارس پک

Back End Developer

February 2026 - Present (6 months)

Tehran

Trium Novem GmbH

2 years 2 months

Full-stack Developer

August 2023 - September 2025 (2 years 2 months)

Berlin, Germany

Development Team Lead

August 2023 - August 2025 (2 years 1 month)

Berlin, Germany

- Led a team of 3 developers in building an ERP platform for construction company project and employee management, resulting in a 30% increase in operational efficiency.
- Developed a mobile application for employee work time management, improving time tracking accuracy by 95% and reducing payroll processing time by 50%.
- Converted complex Excel-based processes into a comprehensive ERP system, streamlining operations and increasing data accuracy by 80%.
- Implemented Next.js and React.js for frontend development, reducing page load times by 40% and improving user experience.
- Utilized NestJS and Node.js to create a robust backend infrastructure, increasing concurrent user capacity by 200% and reducing server response time by 40%.
- Integrated Jira for project management, improving team productivity by 25% and reducing project delivery times by 20%.
- Provided hands-on technical leadership, mentoring junior developers and increasing team's code quality scores by 35%.
- Optimized database queries and implemented caching strategies, resulting in a 60% reduction in API response times.

Freelance

Freelance Software Engineer

July 2021 - September 2025 (4 years 3 months)

London, England, United Kingdom

BUGLOOS

4 years 2 months

Full Stack Developer

February 2021 - September 2023 (2 years 8 months)

Bussum, North Holland, Netherlands

Junior DevOps Engineer

February 2021 - July 2021 (6 months)

Bussum, North Holland, Netherlands

According to one of our projects that were based on Microservice architecture and our team's needs, I felt that we need more modern and new ways to develop and improve our project. So as I had basic knowledge in Docker and Ansible fields, I tried to make some automatic solutions in project architecture. I used Gitlab CI/CD to reduce the volume of repetitive daily tasks so I helped the company and project to develop it and also as a DevOps engineer I supervise on project's development and Operation.

Medior Full-Stack developer

May 2020 - July 2021 (1 year 3 months)

Bussum, North Holland, Netherlands

I worked as a developer in Bugloss company but after 6 months I felt we needed more knowledge about Angular to develop the company's project faster and better than in the past. So I started to learn Angular and worked on different case studies until I mastered that and improved my job position in Bugloss from backend developer to Fullstack developer. I tried to share my knowledge with my teammates and tried to make a better structure for developing the company's project. The structure I made caused me to have a good effect to do more tasks with the best quality in less time in each release. After this good experience for myself improvement, I tried to research and work in the DevOps field so after some time I could have corporate in this field too with the Bugloos company.

Back-end Developer

August 2019 - May 2020 (10 months)

Bussum, North Holland, Netherlands

I start my work in Bugloos as a backend developer and work on some projects with different domains some like e-commerce and portals. try to improve project calculation algorithms, improve query response time for projects, and also improve deprecated bundles and extensions. also, we try to improve workflow for projects to get more efficient releases.

Freelancer
Full-stack Developer
September 2012 - August 2019 (7 years)
Sabzevar ,Khorasan Razavi ,Iran

HeyzhaCO
Web Application Developer
September 2017 - January 2019 (1 year 5 months)
Iran, Sabzevar

Cooperation with Heyzha company was a great spark for success in my work life. I did lots of project in this company. At first I started my work with solving the problems of a website with Laravel framework. Also I developed other websites with Yii2 framework and it followed a great impact because it caused 33% improvement in all the projects of Heyzha company. In the same way the income of company for developing more and more projects had improved, So the company experienced an up ward trend. By the way I experienced such a great challenges in designing complicated portals.

Khayyam University
Back End Developer
2015 - 2017 (2 years)
Khorasan-e Razavi Province, Iran

In Khayyam university I had a game project. Its name was tik-tak-toe that was in relation with IOS app. For developing it, I used node.js platform and socket.io library. Also I experience a team work project in this university. It was developing Khayyam university culture center website. Actually because of my good background in bachelor final project, use node.js and PHP together, this great project was given to me.
